

Felix.

Feeling Is Believing

Felix is a true extension of your hand. Use it just like you would use a pencil.

Felix Stays Put!

It doesn't roam around your desk like a mouse does.

Maintenance Free

Felix is surface independent and self contained. It doesn't need special surfaces, cleaning, or maintenance.

Saves Space

Felix occupies a mere 6" square of prime desktop real estate. Far less than tablets or mice.

Light Rays Ahead

Revolutionary light technology provides precision not available in any other pointing device. Resolution: 320 dpi.

One-to-One Ratio

This 1-inch square represents your entire screen. Moving your hand 1 inch moves the pointer across the entire screen. And no matter what size monitor you have, Felix automatically adjusts to it.

Absolute Positioning

Other devices require physical gymnastics to locate your cursor! The position of the Felix handle is exactly related to the cursor position on the screen.

Designed as an extension of your fingertips, Felix™ lets you control the Macintosh® screen cursor with pin-point accuracy. It's as natural as writing with a pen or as simple as pointing your finger.

Special software comes with Felix that turns this "super mouse" into a truly intelligent input device and lets you do things you may not have thought were even possible. Things like instantly creating high-precision floating window areas anywhere on the screen, and providing "no-hand" automatic access to important window control areas like the close box, zoom box, etc. Felix can change the way you relate to your Macintosh and make it easier for you to get more things done in less time.

	Felix	Mouse	Trackball	Tablet
Surface Requirements	none	desk pad	none	desktop
Resolution	320 dpi	200 dpi	200 dpi	200 dpi
Cursor Control	absolute	relative	relative	1:1
Programmable	yes	no	no	yes
Motion Required	fingers	arm	arm	arm
